Depending on circumstances, procedures indicated by "CAUTION" may also be linked to serious results. In any case, it is important to follow the directions for

DESIGN PRECAUTIONS

↑ WARNING

- Some failures of the GOT or cable may keep the outputs on or off. Som failures of a touch panel may cause malfunction of the input objects such as a touch switch. An external monitoring circuit should be provided to check fo output signals which may lead to a serious accident. Not doing so can cause an accident due to false output or malfunction.
- Do not use the GOT as the warning device that may cause a seriou accident. An independent and redundant hardware or mechanical interlock is required to configure the device that displays and outputs serious warning Not doing so can cause an accident due to false output or malfunction.
- When the GOT detects its backlight failure, the GOT disables the inpurpoperation on the touch switch(s). Thus, operators cannot operate the GO with touches. The GOT backlight failure can be checked with a system signal
- Incorrect operation of the touch switch(s) may lead to a serious accident if the GOT backlight is gone out.

 When the GOT backlight goes out, the POWER LED blinks (blue/orange) and
- the display section dims, while the input of the touch switch(s) remains active This may confuse an operator in thinking that the GOT is in "screensayer" mode, who then tries to release the GOT from this mode by touching the display section, which may cause a touch switch to operate.
- The display section of the GOT is an analog-resistive type touch panel Simultaneous pressing of two or more areas on the display section may activate the switch between those areas. Do not press two or more areas simultaneously on the display section. Doing so may cause an accident due to incorrect output or malfunction
- When programs or parameters of the controller (such as a PLC) that is monitored by the GOT are changed, be sure to shut off the power of the GOT promptly, and power on the GOT again. Not doing so can cause an accident due to false output or malfunction
- If a communication fault (including cable disconnection) occurs durin monitoring on the GOT, communication between the GOT and PLC CPU i suspended and the GOT becomes inoperative. A system where the GOT is used should be configured to perform any significant operation to the system by using the switches of a device other than the GOT on the assumption that a GOT communication fault will occur. Not doing so can cause an accident due to false output or malfunction

DESIGN PRECAUTIONS

↑ CAUTION

- Do not hundle the control and communication cables with main-circuit, power or other wiring. Run the above cables separately from such wiring and keep them a minimum of 100 mm apart. Not doing so noise can cause a malfunction
- Do not press the GOT display section with a pointed material as a pen or drive Doing so can result in a damage or failure of the display section
- Turn on the controllers and the network devices to be ready for communication before they communicate with the GOT. Failure to do so can cause a communication error on the GOT
- When the GOT is subject to shock or vibration, or some colors annear on the screen of the GOT the screen of the GOT might flicker

MOUNTING PRECAUTIONS MARNING

Be sure to shut off all phases of the external power supply used by the system before mounting or removing the GOT main unit to/from the panel. Not doing so can cause the unit to fail or malfunction

MOUNTING PRECAUTIONS

↑ CAUTION

- Use the GOT in the environment that satisfies the general specification described in this manual. Not doing so can cause an electric shock, fire malfunction or product damage or deterioration.
- When mounting the GOT to the control panel, tighten the mounting screws in the specified torque range (0.3 N·m to 0.5 N·m) can cause the GOT to drop, shor circuit or malfunction. Overtightening can cause a drop, short circuit o malfunction due to the damage of the screws or the GOT.
- Remove the protective film of the GOT. When the user continues using the GOT with the protective film, the film may not be removed.
- Operate and store the GOT in environments without direct sunlight, high temperature, dust, humidity, and vibrations.
- Do not use the GOT in an environment with oil or chemicals. Doing so may cause failure or malfunction due to the oil or chemical entering into the GOT.

WIRING PRECAUTIONS

M WARNING

Be sure to shut off all phases of the external power supply used by the system before wiring. Failure to do so may result in an electric shock, product damage of

WIRING PRECAUTIONS

⚠CAUTION

- Please make sure to ground FG terminal of the GOT power supply section by applying 100 Ω or less which is used exclusively for the GOT. Not doing so may cause an electric shock or malfunction.
- Correctly wire the GOT power supply section after confirming the rated voltage and terminal arrangement of the product. Not doing so can cause a fire or failure
- Tighten the terminal screws of the GOT power supply section in the specified torque range (0.5 N·m to 0.8 N·m). Undertightening can cause a short circuit or malfunction. Overtightening can cause a short circuit or malfunction due to the damage of the screws or the GOT.
- For a terminal processing of a wire to the GOT power supply section, connect a stranded wire or a single wire directly, or use a rod terminal with an insulation
- Exercise care to avoid foreign matter such as chips and wire offcuts entering the GOT. Not doing so can cause a fire, failure or malfunction.
- Plug the communication cable into the GOT interface or the connector of the connected unit, and tighten the mounting screws and the terminal screws in the specified torque range. Undertightening can cause a short circuit or malfunction Overtightening can cause a short circuit or malfunction due to the damage of the screws or unit

TEST OPERATION PRECAUTIONS

/ WARNING

Before performing the test operations of the user creation monitor screen (such as turning ON or OFF bit device, changing the word device current value, changin the settings or current values of the timer or counter, and changing the buffe memory current value), read through the manual carefully and make yoursel familiar with the operation method. During test operation, never change the data of the devices which are used to perform significant operation for the system False output or malfunction can cause an accident

STARTUP/MAINTENANCE PECALITIONS

A WARNING

- When power is on, do not touch the terminals. Doing so can cause an electric shock or malfunction
- Before starting cleaning or terminal screw retightening, always switch off the nower externally in all phases. Not doing so can cause the unit to fail o malfunction. Undertightening can cause a short circuit or malfunction Overtightening can cause a short circuit or malfunction due to the damage of the ecrowe or unit

STARTUP/MAINTENANCE PECALITIONS

↑ CAUTION

- Do not disassemble or modify the unit. Doing so can cause a failure malfunction injury or fire
- Do not touch the conductive and electronic parts of the unit directly. Doing s can cause a unit malfunction or failure.
- The cables connected to the unit must be run in ducts or clamped. Not doing so can cause the unit or cable to be damaged due to the dangling, motion or accidental pulling of the cables or can cause a malfunction due to a cable
- When unplugging the cable connected to the unit, do not hold and pull from the cable portion. Doing so can cause the unit or cable to be damaged or can cause a malfunction due to a cable connection fault.
- Do not drop the module or subject it to strong shock. A module damage may
- Before touching the unit, always touch grounded metals, etc. to discharge station electricity from human body, etc. Not doing so can cause the unit to fail or malfunction
- Replace battery with GT11-50BAT by Mitsubishi electric Co. only. Use of another battery may present a risk of fire or explosion.
- Dispose of used battery promptly.
- Keep away from children. Do not disassemble and do not dispose of in fire.

TOUCH PANEL DECALITIONS

↑ CAUTION

- For the analog-resistive film type touch panels, normally the adjustment is no required. However, the difference between a touched position and the object position may occur as the period of use elapses. When any difference between a touched position and the object position occurs, execute the touch pane calibration
- When any difference between a touched position and the object position occurs. other object may be activated. This may cause an unexpected operation due to incorrect output or malfunction

DECALITIONS WHEN THE DATA STORAGE IS IN USE

↑ WARNING

- If the SD card mounted on drive A of the GOT is removed while the GOT i accessed processing for the GOT might be interrupted about for 20 seconds The GOT cannot be operated during this period. The functions that run in the background including a screen updating, alarm, logging, scripts, and others are also interrupted. Since this interruption makes an impact to the system operation, it might cause failure. After inhibiting access to the SD card on the GOT utility screen, check that the SD card access LED is off and remove the SE
- If the data storage mounted on the GOT is removed while the GOT is accessed the data storage and files are damaged. To remove the data storage from the GOT, check that the access to the data storage in SD card access LED, the system signal, and others is not performed.
- Turning off the GOT while it accesses the SD card results in damage to the SD card and files.
- When removing the SD card from the GOT, make sure to support the SD card by hand as it may pop out. Failure to do so may cause the SD card to drop from the GOT, resulting in a failure or break.
- Before removing the SD card from the GOT, follow the procedure for removal or the utility screen of the GOT. After the successful completion dialog is displayed. remove the SD card by hand carefully. Failure to do so may cause the SD card to drop from the GOT, resulting in a failure or break

It is impossible to completely avoid this symptom, as the liquid crystal display comprises of a great number of display elements. In addition, color tone difference, unevenness of brightness, or flickers may occur due to individual differences of liquid crystal display panels. Please note that these symptoms occur due to GOT's characteristic and are not caused by product defect.

Notes for compliance to EMC regulation

1) General notes on the use of communication cables

Any device which utilizes a data communication function is susceptible to the wider effects of local EMC noise. Therefore, when installing any communication cables care should always be taken with the routing and location of those cables. The GOT units identified on the previous chapter are compliant with the EMC requirement when the following communication cables are used:

GOT	Unit	Existing Cables	User Made Cables
GT2105 ar GT2105	-QTBDS nd -QMBDS	Ex. GT01-C30R4-8P (as shown in EX.1) A complete list of appropriate cables can be found in the GOT user's manual.	3rd party cables need to be independently tested by the user to demonstrate EMC compliance.

2) General notes on Power supply

The GT2105-QTBDS and GT2105-QMBDS unit requires an additional ferrite filter to be attached to the 24V DC power supply cables. The filter should be attached in a similar manner as shown in the figure opposite, i.e. the power cables are wrapped around the filter. However, as with all EMC situations the more correctly applied precautions the better the systems Electro-magnetic Compatibility. The ferrite recommended is a TDK ZCAT3035-1330 or similar. The ferrite should be placed as near to the 24V DC terminals of the GT2105-QTBDS and GT2105-QMBDS as possible (which should be within 75mm of the GOT terminal).

Before performing the test operations of the user creation monitor screen (such as turning ON or OFF bit device, changing the word device current value, changing the settings or current values of the timer or counter, and changing the buffer memory current value), read through the manual carefully and make yourself familiar with the operation method. During test operation, never change the data of the devices which are used to perform significant operation for the system. False output or malfunction can cause an accident.

STARTUP/MAINTENANCE **MARNING** RECAUTIONS

- When power is on, do not touch the terminals. Doing so can cause an electroshock or malfunction
- Before starting cleaning or terminal screw retightening, always switch off the power externally in all phases. Not doing so can cause the unit to fail o malfunction. Undertightening can cause a short circuit or malfunction Overtightening can cause a short circuit or malfunction due to the damage of the screws or unit.

STARTUP/MAINTENANCE PRECAUTIONS **⚠CAUTION**

- Do not disassemble or modify the unit. Doing so can cause a failure malfunction, injury or fire.
- Do not touch the conductive and electronic parts of the unit directly. Doing scan cause a unit malfunction or failure.
- The cables connected to the unit must be run in ducts or clamped. Not doing s can cause the unit or cable to be damaged due to the dangling, motion of accidental pulling of the cables or can cause a malfunction due to a cable connection fault.
- When unplugging the cable connected to the unit, do not hold and pull from th cable portion. Doing so can cause the unit or cable to be damaged or can caus a malfunction due to a cable connection fault.

- Before touching the unit, always touch grounded metals, etc. to discharge stat electricity from human body, etc. Not doing so can cause the unit to fail malfunction.
- Replace battery with GT11-50BAT by Mitsubishi electric Co. only. Use of another battery may present a risk of fire or explosion.
- Dispose of used battery promptly. Keep away from children. Do not disassemble and do not dispose of in fire.

CAUTION

- For the analog-resistive film type touch panels, normally the adjustment is no required. However, the difference between a touched position and the object position may occur as the period of use elapses. When any difference between a touched position and the object position occurs, execute the touch pane calibration.
- When any difference between a touched position and the object position occurs other object may be activated. This may cause an unexpected operation due to incorrect output or malfunction.

ATA STORAGE IS IN USE WARNING

- If the SD card mounted on drive A of the GOT is removed while the GOT is accessed, processing for the GOT might be interrupted about for 20 seconds. The GOT cannot be operated during this period. The functions that run in the background including a screen updating, alarm, logging, scripts, and others are also interrupted. Since this interruption makes an impact to the system operation, it might cause failure. After inhibiting access to the SD card on the GOT utility screen, check that the SD card access LED is off and remove the SD card
- card.
 If the data storage mounted on the GOT is removed while the GOT is accessed the data storage and files are damaged. To remove the data storage from the GOT, check that the access to the data storage in SD card access LED, the system signal, and others is not performed
- Turning off the GOT while it accesses the SD card results in damage to the SD
- When removing the SD card from the GOT, make sure to support the SD card by hand as it may pop out. Failure to do so may cause the SD card to drop from the GOT, resulting in a failure or break.
 - the GOI, resulting in a failure or break. Before removing the SD card from the GOT, follow the procedure for removal or the utility screen of the GOT. After the successful completion dialog is displayed remove the SD card by hand carefully. Failure to do so may cause the SD card to drop from the GOT, resulting in a failure or break.

Notes for compliance to EMC regulation

1) General notes on the use of communication cables General notes on the use of communication caroles Any device which utilizes a data communication function is susceptible to the wider effects of local EMC noise. Therefore, when installing any communication cables care should always be taken with the routing and location of those cables. The GOT units identified on the previous chapter are compliant with the EMC

requirement when the following communication cables are used.						
GOT Unit	Existing Cables	User Made Cables				
		3rd party cables need to independently tested by the user to demonstrate EM compliance.				

2) General notes on Power supply
The GT2105-QTBDS and GT2105-QMBDS unit requires an additional ferrite filter to be attached to the 24V DC power supply cables. The filter should be attached in a similar manner as shown in the be attached in a similar manner as shown in the figure opposite, i.e. the power cables are wrapped around the filter. However, as with all EMC situations the more correctly applied precautions the better the systems Electro-magnetic Compatibility. The ferrite recommended is a TDK ZCAT3035-1330 or similar. The ferrite should be placed as near to the 24V DC terminals of the GT2105-QTBDS and GT2105-QMBDS as possible, (which should be within 75mm of the possible (which should be within 75mm of the GOT terminal).
